(PDF) Biology of Gila Monsters and Beaded Lizards, Chapter ...

Its name comes from the Gila River, where the lizards are common. Gila monsters are desert dwellers, living near washes and arroyos and in semiarid rocky regions of desert scrub or grasslands. Gila monsters also seem to prefer rocky foothills and avoid open flats and agricultural areas. They can live at elevations up to 5,000 feet (1,500 meters).

Gila Monster

By Laura Allard and Dr. Frey
Biology and Identification The gila monster (pronounced 'Hee-la'), *Heloderma suspectum*, is a slow-moving species of venomous lizard found within Utah, specifically in the Southwestern corner of Washington County, near where Utah meets both Arizona and Nevada. This is the northern extent of their distribution, which stretches from Sinaloa, Mexico to Washington County, Utah and from SW New Mexico to the Colorado River.

Dr. Daniel D. Beck | Central Washington University

A black-and-orange lizard native to the southwestern United States and Mexico, Gila monsters have venomous saliva. There's a peptide in the venom that's used to treat type 2 diabetes. "We'd like to understand what the peptide is doing in the monsters and then can better understand how it works in humans," Wilson said.
