This diagram shows the layout of a common car audio system and signal flow. The dotted black line shows the path of the preamp audio signal (before it's amplified), from a head unit, through an equalizer and electronic crossover and to the amplifier. A video signal is also sent from the head unit to a pair of video screens in the back seat area. From the amplifier, an amplified audio signal (the solid black line) goes to each speaker in the system — one amplifier powers a subwoofer.

The remote turn-on wire usually comes from the radio, in which case your amplifier won't turn on if the radio isn't on. So if there is no power at the remote terminal on your amplifier, the next step is to check for power at the corresponding wire where it connects to the radio. If your amp is wired incorrectly, and the remote turn-on is connected instead to the power antenna wire on the head unit, you may find that the amp only powers on sometimes. In this specific situation, the amp will ...
