Genetics and Punnett Square Practice Worksheet I) For each of the genotypes below determine what the phenotype would be. Purple flowers are dominant to white flowers. Hairy knuckles are dominant to non-hairy knuckles in humans. Bobtails in cats are recessive. Normal tails are dominant. Round seeds are dominant to wrinkled seeds in pea plants.

*Century Middle | IB Middle Years Programme School*

The Punnett square is a diagram that is used to predict an outcome of a particular cross or breeding experiment. It is named after Reginald C. Punnett, who devised the approach to determine the probability of an offspring's having a particular genotype (combination of alleles).

*Understanding Genetics: Punnett Squares*

More Punnett Square Practice 11.2. A punnett square helps scientists predict the possible genotypes and phenotype s of offspring when they know the genotypes of the parents. The phenotype is the physical appearance of an organism and the genotype is the inherited combination of alleles. This skill sheet will give you additional practice in using punnett squares to solve genetics problems.
