Variable valve timing is nothing new, but now Harley-Davidson will use it on an upcoming engine. The company recently filed a patent on a new V-Twin engine and it has VVT. The patent was spotted by Motorcycle.com, and as the publication states, it was really a patent for a modular engine balancer that mounts on either side of a crankshaft.However, in that patent, it says that VVT is used.

~~Harley Davidson Files Patent for V-Twin Engine With VVT ...~~

The biggest improvements people wanted to see was in the power, heat and vibration. Harley was able to increase the power while also keeping the range and consumption similar and in some cases making it even better. To deal with the heat issue, Harley reduced the exhaust gas temperature by 100°F (55.6 C), allowing for a more comfortable ride. They were able to make this possible by relocating the hot catalytic converters further from the cockpit, as well as introducing a better water ...
