## Torsional Vibration Examples And Solutions

Torsional vibration of a steam turbine rotor is caused by an abrupt change in the turbine load (shutdown of turbine load, failure of three-phase reclosing, etc.) or the unbalanced three-phase torque from the electric power generator. Among torsional vibrations of the rotor system, coupled torsional vibration of the blade – disk – shaft system is peculiar to high-capacity steam turbine units, and many accidents caused by this torsional vibration have been reported [12].

It is a homogeneous differential equation. Solution is. Boundary conditions: (1)  $\theta = 0$  when  $t = 0$ . (2)  $\theta = A$  when  $\sqrt{Kt/I} * t = \pi/2$ .

$C_1 = 0$  and  $C_2 = A$ . and the solution becomes. This is a simple harmonic motion. Since  $Kt = T/\theta$  and  $\theta = (TL)/(GJ)$ , so  $Kt = (JG)/L$ .

Torsional Vibrations - Christian Brothers University

Torsional vibration is angular vibration of an object—commonly a shaft along its axis of rotation. Torsional vibration is often a concern in power transmission systems using rotating shafts or couplings where it can cause failures if not controlled. A second effect of torsional vibrations applies to passenger cars. Torsional vibrations can lead to seat vibrations or noise at certain speeds. Both reduce the comfort. In

### SPEED SENSORS DEDICATED TO THE ANALYSIS OF TORSIONAL VIBRATION

Torsional vibration is defined as the angular vibration of an object, often represented by a shaft along its axis of rotation. This effect can become a serious concern in power transmission systems, comprising of shafts and couplings, where failures may occur as a result of increasing or uncontrolled torsional vibration. In this article, David Proud General Manager of Reich Drive Systems UK highlights the critical part that torsional vibration calculations play in ensuring that the coupling ...

All rotating machines (not just turbomachinery!) have torsional excitations of one form or another. Some examples include blade passing frequency in turbomachines, shaft runout, and the torque exerted by pistons in reciprocating machines. Unlike lateral excitations, torsional natural frequencies are not influenced in any way by rotation speed.
