He has since earned a reputation as a scientific botanical illustrator of note.

About Arthur Harry Church - BOTANICAL ART & ARTISTS

Pollination mechanism can be defined by cross-pollination or by self-pollination. Cross-pollination is also known as allogamy which occurs only when pollen is delivered to a flower from a different plant. Plants adapted to cross-pollinate often these plants have taller stamens than carpels. Self-pollination occurs when pollen from one flower pollinates the same flower or other flowers of the same individual.

Types of Floral Mechanism - Arthur Harry Church - Bok ...

A flower, sometimes known as a bloom or blossom, is the reproductive structure found in flowering plants. The biological function of a flower is to facilitate reproduction, usually by providing a mechanism for the union of sperm with eggs. Flowers may facilitate outcrossing resulting from cross pollination or allow selfing when self pollination occurs. Pollination have two types which is self-pollination and cross-pollination. Self-pollination happens when the pollen from the anther is deposited
